Supply Chain Supervisor – Logistics

Supply Chain Management · Administration & Operations

Job title	Supply Chain Supervisor – Logistics	**Job code**	JD-HRM-107
Department	Supply Chain Management	**Division**	Administration & Operations
Grade	EC3	**Reports to**	Chief Operating Officer (interim operational responsibility, initial operating period)
Supervises	Supply Chain Specialist – Logistics; Supply Chain Associate – Logistics	**SCFHS licence**	No

Job Summary

The Supply Chain Supervisor – Logistics leads the day-to-day operations of the Logistics & Inventory Unit, including receiving, warehousing, inventory control, replenishment and internal distribution of non-pharmaceutical supplies across the Hospital, including designated substores and point-of-use inventory under the Unit's responsibility. The role ensures inventory is accurately received, stored, controlled, issued, monitored and accounted for throughout its lifecycle, while maintaining supply continuity, appropriate storage conditions, accurate records and compliance with the Supply Chain Manual and applicable procedures.

Essential Duties & Responsibilities

1. Logistics & Inventory Operations

i. Oversee day-to-day receiving, inspection, storage, inventory control, replenishment, picking, issuing, internal distribution, returns and disposal activities for non-pharmaceutical supplies.

ii. Ensure deliveries are checked against approved purchase orders and delivery documentation, and that quantities, condition and other required receiving information are accurately recorded before acceptance or escalation of discrepancies.

iii. Ensure goods are appropriately stored, labelled, segregated and protected in accordance with product requirements, safety requirements and applicable storage conditions.

iv. Oversee replenishment and internal distribution to hospital departments, substores and other designated inventory locations based on approved requirements and stock levels.

v. Monitor stock availability, consumption, minimum/maximum levels, reorder points, lead times and other inventory parameters, and coordinate replenishment requirements with P&C and requesting departments to reduce stock-outs and excess inventory.

vi. Coordinate urgent supply requirements and escalate actual or potential supply continuity risks promptly.

2. Inventory Control, Substores & Loss Prevention

i. Maintain effective inventory controls across the central store, designated substores and other inventory locations under the Unit's responsibility, ensuring stock movements are properly recorded and traceable.

ii. Plan and oversee cycle counts, periodic physical inventories and other stock verification activities, investigate variances and ensure required corrections or escalations are completed in accordance with approved procedures.

iii. Monitor expiry dates, shelf life and stock rotation, applying appropriate inventory practices such as FEFO/FIFO where applicable to minimize expiry and waste.

iv. Identify, segregate and control expired, damaged, defective, recalled, returned or otherwise unusable stock and coordinate the required return, replacement, write-off or disposal process with relevant functions.

v. Investigate and promptly escalate missing, unexplained or suspected stolen inventory, maintain supporting records, and coordinate with Finance, Security, Compliance or other relevant functions as required.
vi. Monitor slow-moving, obsolete and excess inventory and coordinate appropriate action with P&C, Finance and requesting departments.
vii. Ensure access to stores and controlled inventory areas is appropriately restricted and that inventory custody and segregation-of-duties requirements are followed.
viii. Coordinate with departments responsible for substores and point-of-use inventory to maintain appropriate stock levels, storage conditions, stock rotation, record accuracy and inventory controls, and escalate recurring non-compliance.

3. Receiving, Returns & Supplier Issues

i. Coordinate receiving schedules and resolve or escalate shortages, over-deliveries, damaged goods, incorrect items, documentation discrepancies and other receiving issues with P&C, suppliers and requesting departments.
ii. Coordinate supplier returns, replacements and other logistics-related corrective actions and ensure associated inventory records are updated.
iii. Support product recalls by identifying affected inventory, immediately controlling or segregating stock, maintaining traceability and coordinating required actions with Quality, clinical departments, P&C and other relevant functions.

4. Coordination & Supply Continuity

i. Coordinate and follow up with all relevant internal and external parties required for effective logistics and inventory operations, including P&C, Finance, requesting departments/end users, clinical and technical teams, Quality, Infection Control, Facilities, Security, suppliers and other support functions as applicable.
ii. Work closely with P&C on stock requirements, replenishment, supplier lead times, shortages, substitutions, delivery performance and other matters affecting supply continuity.
iii. Engage requesting departments/end users on consumption, stock requirements, service issues, product feedback and inventory-related concerns.
iv. Provide inventory consumption, availability, movement and other operational information required to support procurement planning, product standardization and evaluation activities.

5. Systems, Records & Audit

i. Ensure receipts, issues, transfers, returns, adjustments, disposals and other inventory movements are accurately and promptly recorded in the approved ERP/inventory system.
ii. Maintain complete inventory, receiving, stock-count, adjustment, expiry, damage, return, disposal and other required logistics records and supporting documentation.
iii. Review inventory discrepancies and system exceptions, ensure appropriate reconciliation and approvals, and escalate material or recurring issues.
iv. Maintain operational readiness for inventory and logistics audits, inspections and accreditation requirements, and coordinate timely closure of findings and corrective actions.
v. Coordinate with Finance on inventory reconciliations, stock adjustments, write-offs, disposals and other inventory matters requiring financial review or approval.

6. Performance & Reporting

i. Monitor inventory accuracy, stock availability, stock-outs, expiry, damage, losses, excess/obsolete stock, receiving and distribution performance and other relevant operational indicators.
ii. Provide regular operational reports to the Chief Operating Officer and highlight significant inventory, supply continuity, safety, compliance or operational risks requiring management attention.
iii. Provide relevant Supply Chain performance and inventory information to the Supply Chain Director for cross-unit coordination and consolidated Supply Chain reporting.
iv. Identify and implement practical improvements to inventory control, storage, distribution and logistics processes.

7. Team Supervision

i. Supervise, coach, and develop the Supply Chain Specialist – Logistics and Supply Chain Associate – Logistics.
ii. Set individual work priorities and performance expectations and provide regular performance feedback.
iii. Ensure adequate staffing, training, and cross-coverage across the unit.
iv. Ensure staff follow approved receiving, storage, inventory, distribution, safety and documentation procedures.

8. Additional Responsibilities

i. Perform and oversee other Logistics & Inventory activities reasonably required for the effective operation of the Unit, as assigned by the Chief Operating Officer during the interim operating period.

Qualifications: Education, Training & Experience

1. Education — Bachelor's degree in Supply Chain, Logistics, Healthcare Administration, or a related field preferred.
2. Experience — 5–7 years of relevant experience in inventory management, warehousing, hospital materials management or logistics, including at least 2 years in a supervisory or team-lead role.
3. Experience — Healthcare or hospital supply chain experience strongly preferred.
4. Certification — Relevant professional certification in logistics, inventory or supply chain management is an advantage.

Skills

1. Strong working knowledge of inventory control, receiving, warehousing, stock counting, replenishment and internal distribution practices.
2. Working knowledge of ERP or inventory management systems and inventory reporting.
3. Understanding of inventory traceability, expiry control, recalls, storage requirements and loss-prevention controls relevant to a hospital environment.
4. Ability to investigate inventory discrepancies, identify root causes and coordinate corrective action.
5. Strong team-leadership and cross-functional coordination skills.
6. Ability to manage competing priorities across multiple operational areas.
7. Effective communication with executive leadership and cross-unit partners.

Knowledge

1. Receiving, warehousing, storage, distribution and stock-rotation (FEFO/FIFO) practices.
2. Inventory control, cycle counting, par-levels, and expiry/damage/recall management.
3. ERP/inventory systems, barcode/scanning, cold-chain and medical-supply handling.
4. Knowledge of applicable KSA laws, regulations and the hospital Code of Conduct.
5. Knowledge of confidentiality, data-protection (PDPL) and information-governance obligations.

Attitude & Behaviour

1. Respect & Integrity
2. Employee-Focused Service
3. Accountability
4. Continuous Learning
5. Teamwork & Collaboration
6. Confidentiality
7. Professionalism
8. Adaptability & Resilience

9. Fairness & Impartiality
10. Commitment to Compliance

Physical Requirements

- Primarily office-based with prolonged computer and screen use.
- Occasional movement across stores, warehouse and hospital departments.
- Ability to work under pressure and meet deadlines.
